

# Installation Manual

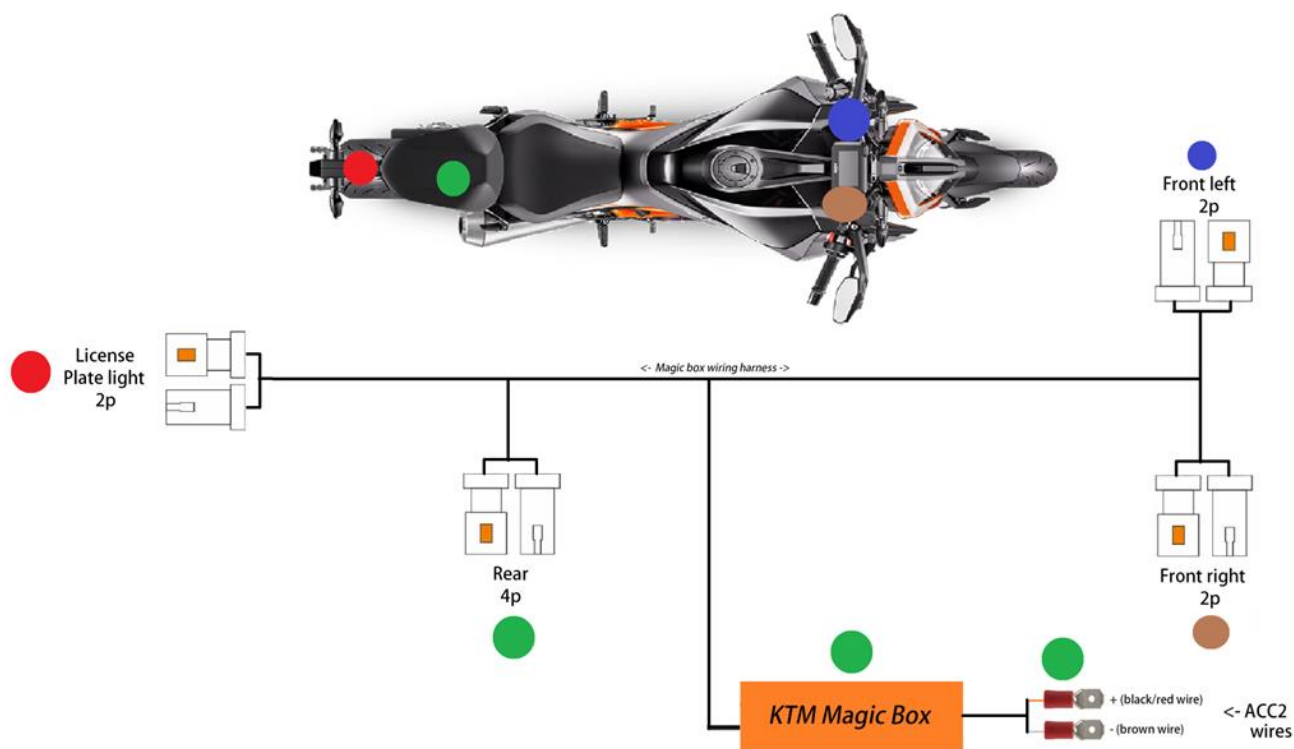

## Magic Box V5

READY   
TO RACE

KTM Duke 1290R/EVO

## Locations of connectors

## Preparation

Before installing the Magic Box, you must first correctly install the Akrapovic Mapping. Follow the steps below carefully!

### Step 1: Remove the Indicators

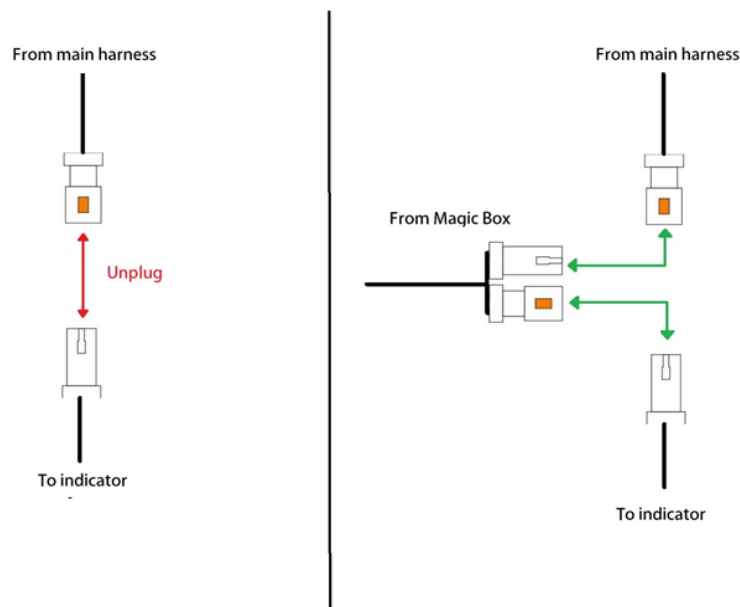

Unplug **ALL** indicators\*\* (turn signals) from the bike before starting the installation of the Akrapovic Mapping. So that means the 2 indicators in the front, and 4-pin connector in the rear.

### Step 2: Install the Akrapovic Mapping

Perform the installation of the Akrapovic Mapping according to the manufacturer's instructions.

### Installation of the Magic Box

Follow this step-by-step guide closely to ensure proper installation and avoid malfunctions. If you have any doubts or encounter issues, always consult your dealer for assistance.

#### Front:

In the front there are **2x 2-pin** connectors (L+R), disconnect these connectors and install the connectors of the Magic Box in between.

Route the wiring harness of the Magic Box on the left side of the motorcycle to the rear behind the fairings.

#### Rear:

In the rear you will find **1x 4-pin** and **1x 2-pin** collecting connector coming from the tail. Disconnect both connectors and install the Magic Box in between.

\*It could be that the 2-pin connector is located inside the plateholder.

You are now Ready to >> Race.
